DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

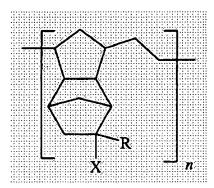

Claim Rejections - 35 USC § 103

- 2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 3. The factual inquiries set forth in *Graham* v. *John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:
 - 1. Determining the scope and contents of the prior art.
 - 2. Ascertaining the differences between the prior art and the claims at issue.
 - 3. Resolving the level of ordinary skill in the pertinent art.
 - 4. Considering objective evidence present in the application indicating obviousness or nonobviousness.
- 4. Claims 1-18 are rejected under 35 U.S.C. 102(b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Shinagawa et al. (US 6,126,825).

Application/Control Number: 10/506,293

Art Unit: 1713

The invention of claims 1-18 relates to a **process for producing an optical film**from a polyolefin of the formula

in which at every occurrence of the substituents R and X they are either both hydrogen or R is methyl and X is a polar group, and n is a number from 10 to 1000, by casting a solution of the polyolefin in an organic solvent onto a substrate and evaporating the solvent, characterized in that it encompasses the steps of

- (i) dissolving the polyolefin in an organic solvent or solvent mixture,
- (ii) casting the solution onto a smooth substrate in an atmosphere comprising at least IF/o by volume of solvent vapor at a temperature below the boiling point of the solvent' with substantially laminar gas flow,
 - (iii) evaporating the solvent to obtain a self-supporting film, and
- (iv) peeling the film away from the substrate and drying at a temperature rising to 70-140 °C, without any resultant orientation of the film.

Application/Control Number: 10/506,293

Art Unit: 1713

Shinagawa et al. (col. 2, line 17-50) disclose a membrane (or film) comprises a polymer that is substantially identical to the one as claimed. Further, Shinagawa et al. (col. 4, line 56-67) disclose that the film can be prepared by dissolving the polyolefin in an organic solvent and casting the solution onto a substrate, and evaporate the solvent away. Since the film of Shinagawa et al. is to be used as a membrane, the examiner believes that the claimed "peeling the film away" feature is inherent to the process of Shinagawa et al. Regarding drying the film at a temperature rising to 70-140 °C, Shinagawa et al. (col. 7, line 35-43) clearly teaching heating the film to 70 °C to remove residual solvent. Regarding the claimed "optical film" feature, in view of the substantially identical composition of Shinagawa et al. and the composition claimed in applicants' process, the examiner has a reasonable basis that the claimed "optical film" feature is inherently possessed in Shinagawa et al. Since the PTO does not have proper means to conduct experiments, the burden of proof is now shifted to applicants to show otherwise. In re Best, 562 F.2d 1252, 195 USPQ 430 (CCPA 1977); In re Fitzgerald, 205 USPQ 594 (CCPA 1980).

Further, regarding the claimed "for optical film", applicants must recognize that a recitation of the intended use of the claimed invention must result in a structural difference between the claimed invention and the prior art in order to patentably distinguish the claimed invention from the prior art. If the prior art structure is capable of performing the intended use, then it meets the claim.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to William K. Cheung whose telephone number is (571) 272-1097. The examiner can normally be reached on Monday-Friday 9:00AM to 2:00PM; 4:00PM to 8:00PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, David WU can be reached on (571) 272-1114. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
